SKILLS

- Unity
- C#
- Git
- Rest API
- Socket IO
- Golang
- Adobe XD
- C/C++

EDUCATION

B.S.E

Shahid Beheshti University

2017-2022

- Graduated with a Bachelor's degree in Software Engineering, gaining a solid foundation in software development principles, programming languages, and modern software engineering practices.
- Completed coursework and projects in areas such as game development, UI/UX design, object-oriented programming, and data structures, which laid the groundwork for my career in game development.
- Developed a deep understanding of both the technical and creative aspects of software development, with a keen interest in applying these skills to the field of game development.

PROFILE

Game Developer with nearly 4 years of experience, specializing in Unity and C# to create immersive games. Proficient in the technical aspects of game development, I am now aiming to transition into game design and storytelling. My goal is to blend my programming skills with narrative design, contributing to and learning in an environment focused on innovative and engaging storytelling in games.

WORK EXPERIENCE

Game Developer/Game Designer

Bravo Ready — October 2025 - July 2025

- Integral in developing diverse Web2 games for mobile and PC using Unity, C#, and React Native.
- Collabrated in designing game mechanics and UI/UX for mobile games.

Hexagon Studios — May 2022 - October 2025

- Integral in developing diverse game mechanics for Web3 mobile games using Unity and C#.
- Key contributor to integrating Solana blockchain transactions, enhancing in-game functionalities.
- Collaborated in the team for innovative feature development, focusing on player engagement and interaction.
- Worked on "**Honeyland**", implementing game mechanics, UI, and blockchain elements.
- Designed and developed Dice Fight, a prototype blending rogue-like and Web3 elements with strategic dice-based combat.
- Participated in creating Word Fly, a casual word puzzle game with Unity client and Golang backend, optimized for both online and offline play.

Junior Game Developer/Game Designer

Robin Games — July 2020 - May 2022

- Involved in the design and development of online and real-time multiplayer games.
- Played a pivotal role in UI and game mechanics development, using Unity and C#.
- Contributed to 'Funtomime' and 'Line-Up' games, focusing on user engagement and strategic gameplay design.
- Developed key features in 'Agha Khan' project, gaining expertise in multiplayer systems and server-client interactions.
- Significant role in "Line-Up", focusing on game mechanics and UI/UX design for a football-themed game.
